Project Development Phase

Model Performance Test & Automation Testing

Date	October 3, 2026	**Team ID**	SWTID-2026-6328
Project Name	Auto Ticket Classification using Flow Designer	**Maximum Marks**	10 Marks

Model Performance & Flow Designer Test Validation:

Project team shall fill the following information in model performance and automation testing template for the Auto Ticket Classification system built on ServiceNow Flow Designer.

S.No.	Parameter	Values / Test Results	Screenshot / Execution Artifact
1	Metrics	Rule-Based Keyword Matching Accuracy: • Test Scenario 1 (WiFi Issue): 100% Accuracy (Short Description: 'WiFi not working in library' → Category: Network, Subcategory: Wi-Fi) • Test Scenario 2 (Projector Failure): 100% Accuracy (Short Description: 'Projector not turning on' → Category: Hardware, Subcategory: Projector) • Test Scenario 3 (Password Issue): 100% Accuracy (Short Description: 'Forgot password' → Category: Access, Subcategory: Forgot Password) • Test Scenario 4 (Slow Computer): 100% Accuracy (Short Description: 'Slow computer performance' → Category: Performance, Subcategory: Slow computer) • Classification Confusion Matrix: 0 Misclassifications across defined keyword triggers. • Email Dispatch Reliability: 100% successful trigger to Caller Email Id upon record creation.	[Verified in System Logs & Email Preview]
2	Tune the Model	Flow Designer Rule Optimization & Validation: • Automation Logic: ServiceNow Flow Designer ('Auto Classify School IT Tickets') using If / Else If keyword evaluation. • Trigger Conditions: Record Created on Custom Table ('Incident Workflow') where Category is Empty. • Choice Dependency Tuning: Configured dictionary dependency between Category and Subcategory choice fields. • Validation Method: End-to-end execution testing on Incident Workflow table, form reload verification, and System Logs -> Emails verification.	[Flow Designer & Update Set Completed]
